A Tale of Two Provinces: Surveys of the Reclamation and Restoration Economies in Alberta and British Columbia

Chris Powter – Enviro Q&A Services Richard Dixon – RASAC Nicolas Mansuy – Canadian Forest Service Renee Lapointe – Canadian Wildlife Service David Polster – Polster Environmental Services

L L			
	BC	Alberta	
Reclamation	Same industry types as AB	CRR Specified land	
Restoration	Same types as AB plus BC- specific items, including Caribou habitat restoration; Parks / protected areas / regional parks, and Fire Smart areas	Urban naturalization and forestry; seismic lines; revegetation of forested areas; habitat enhancement (terrestrial, wetland, or aquatic); wetland mitigation or compensation; compensation lakes; carbon offset planting	
Income	The value of <b>funds received to conduct R&amp;R activities</b> in a given year (e.g., contracts, grants, sales, membership fees).		
Expenditures	The value of <b>funds spent on R&amp;R activities</b> in a given year (e.g., costs for staffing, contracts, subcontracts, grants, purchases), which may come from internal funds or flow through from contract or grant funds received

----

#### NOTES

Sample size is low - 112 in Alberta and especially in BC at 32

Therefore, results are indicative rather than true representations of the R&R economy

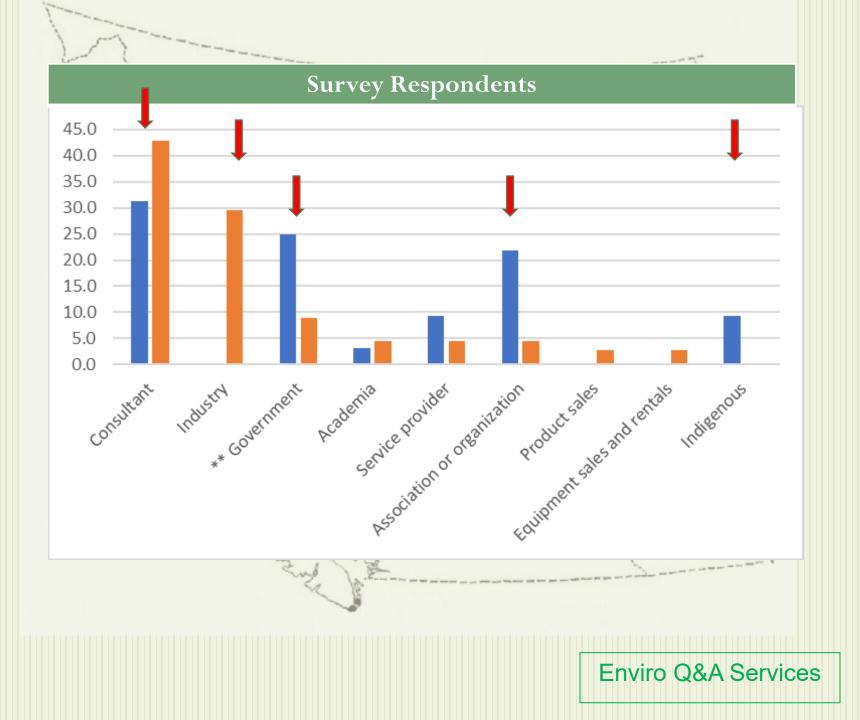

BC survey done in 2020 BUT asked respondents to answer questions for 2019 FY to allow comparison with Alberta survey

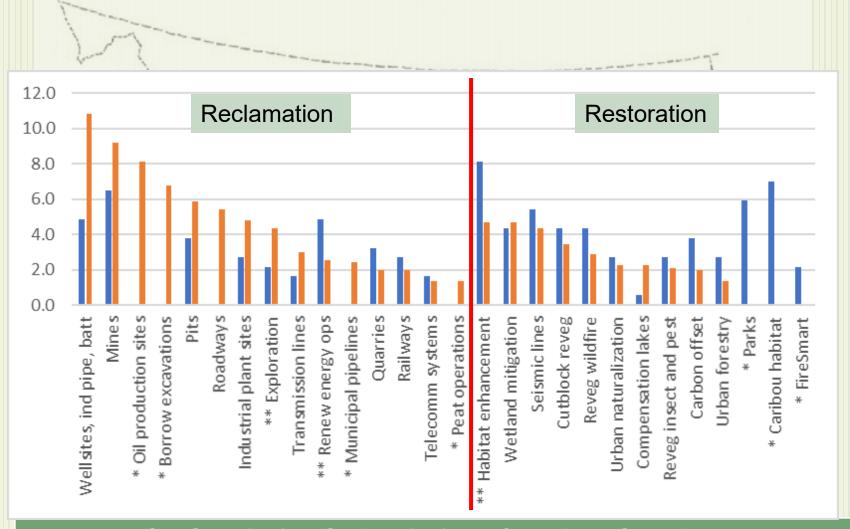

Data in reports are # responses; showing % responses here to allow for comparison between the provinces

Survey questions were somewhat different based on province (\*); therefore, a 0% response doesn't necessarily mean 0% would have selected that response if available

Some survey responses were aggregated to allow for comparison (\*\*)

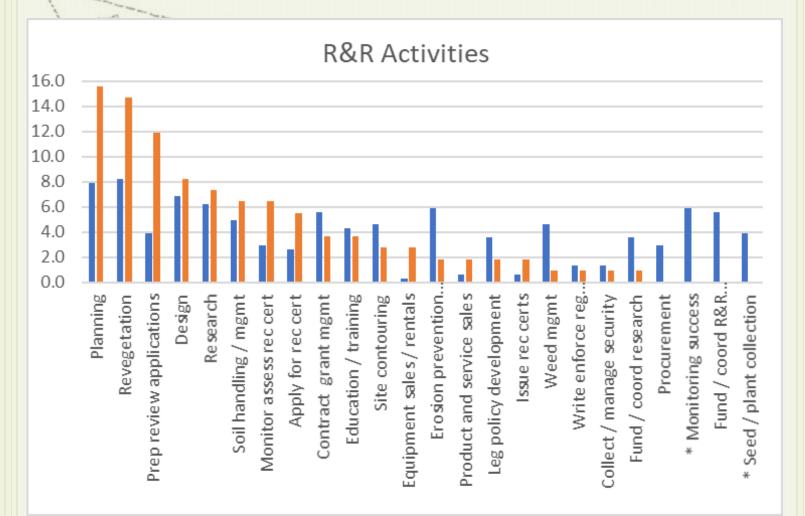

In all the charts, BC is blue and Alberta is orange

Upstream oil and gas (AB) and mines (BC) are the main reclamation types

Habitat enhancement is the main restoration type in BC and is tied with Wetland mitigation in AB

#### We have a lot of skills across many disciplines

Emphasis on office work shows we have evolved from Doers to Planners and Managers

Work Drivers Work Drivers 40.0 30 35.0 25 30.0 25.0 20 20.0 15 15.0 10 10.0 5.0 0.0 – general Org commitment / mandate Timber Mgmt Reg Public Lands Act – general Water Act – general Species at Risk Act Purchase order, contract, grant Wetland Policy Prof organization leg Water Act authorization approval, registration or Code of Practice Public Lands Act – disposition Forest Act Health, Safety and Reclamation Code for Mines Organizational commitment / Species at Risk Act Forest and Range Practices Act Oil and Gas Activitie sAct and Regulation Environmental Management Act MinesAct Riparian Areas Protection Act and EPEA mandate Regulation EPEA

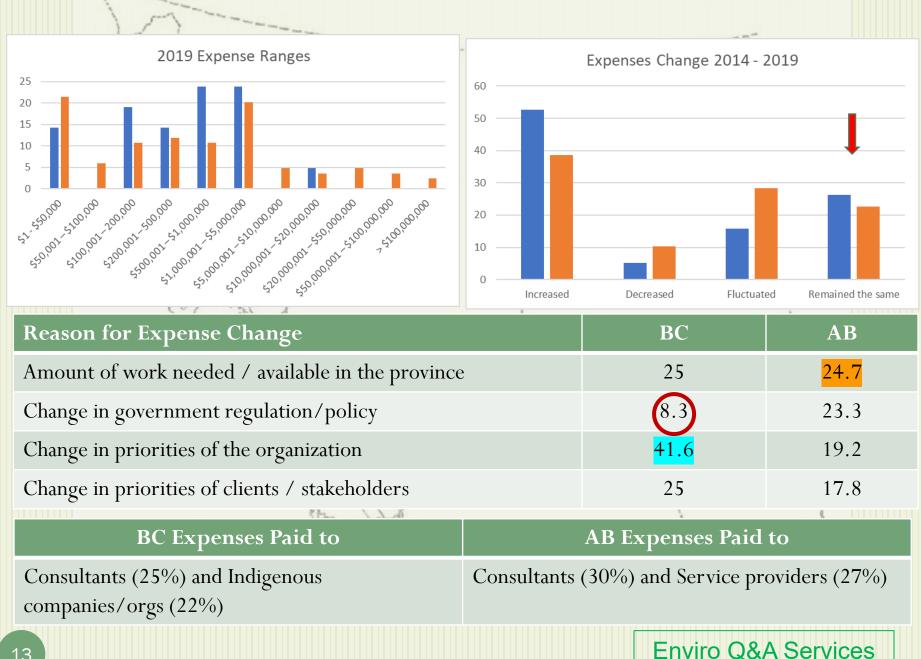

Legislation is a key driver of R&R work in both provinces but in BC organizational commitment/mandate was the primary one, likely reflecting the number of organization respondents

#### Takeaways

The survey data and literature review tend to show a greater emphasis on reclamation in AB and on restoration in BC; however, both are important contributors to the provincial economies

R&R work involves highly skilled practitioners from a variety of disciplines and employer types

3,578 people work at least part time on R&R which translates to 1,907 FTEs

Annual R&R revenue and expenses range from <\$50K to >\$100M

Official employment and financial data on the R&R economy is lacking making comparisons to published sources difficult

Additional national surveys could provide important regional information and should be broadened to include activities such as remediation and decommissioning

Regional and national R&R expertise and experience should be mobilized to support international efforts like the UN Decade on Ecosystem Restoration
